STAINLESS STEEL PRODUCT CARE AND CLEANING

All Mirabelle stainless steel products are fabricated from type 304 stainless steel which contains a minimum 18 percent chromium and 8 percent nickel. This material offers excellent durability, and corrosion and chemical resistance. With proper care, stainless steel will maintain its luster and appearance indefinitely.

Stainless steel should be kept clean and free from contaminants. Periodic cleaning with mild soap and water or glass cleaner and a cotton cloth is recommended as needed.

The following is a list of common conditions that can cause corrosion or discoloration of stainless steel and should be avoided:

Cleansers containing chloride – This includes bleach and any cleaners containing bleach.

Muriatic acid (hydrochloric acid) – Commonly used to clean up after tile/concrete installation. Additives will cause discoloration and some dried soaps actually look like rust.

Water with high iron content – Can leave a rusty residue, especially if allowed to drip continuously.

Contact with iron materials – Including steel wool, machining chips, and iron residue/dust from installation or cleaning of other steel products

Trapped moisture between the product and another object – Rubber mats, metal cans of soaps or cleaners.

Salts – contain chlorides

Any discoloration or corrosion should be removed as soon as possible, or permanent discoloration and pitting of the surface could occur. Most discoloration can be removed with a mild cleanser (Ajax, Bon Ami, etc.) or stainless steel cleaner (Revere Ware Stainless Steel Cleaner, Goddard's Stainless Steel Cleaner, etc.). The surface should then be thoroughly rinsed with clear water.
